A builder’s perspective.
A useful next decision.

Jedidiah "Jedi" Weller

Founder & Software Guru. Speaker. Maker.

Jedidiah brings product strategy, design, engineering, and entrepreneurship into the same conversation. His current writing examines AI economics: how teams can compare APIs, local models, and rented infrastructure around the cost of useful results.

OpenForge’s public team page identifies him as its founder and CEO. Explore the public company pages for the current work behind OpenForge, Startup Wars, and Summon Worlds.

FOR YOUR EVENT OR TEAM

Sessions begin with a real question: what decision should the audience be better equipped to make? Topic, audience, format, and duration are agreed during planning.

START A CONVERSATION

Share your audience, event date or planning window, location or time zone, preferred format, and desired outcome.

Three conversations worth having.

01 / THE REAL COST OF AI

For engineering leaders, founders, and product teams.

Takeaways: Include labor and fallback in the cost model; separate capability from ROI; plan a workload pilot before buying hardware.

02 / FROM UNCERTAIN IDEA TO USEFUL PRODUCT

For founders and product, design, and engineering teams.

Takeaways: Turn assumptions into testable questions; align disciplines around a small experiment; distinguish activity from evidence of user value.

03 / LEARNING ENTREPRENEURSHIP BY MAKING DECISIONS

For educators, entrepreneurship programs, and founder communities.

Takeaways: Frame constraints and consequences; use simulation to start a conversation; connect a classroom debrief to founder uncertainty.

FORMAT & PLANNING

Talks, facilitated discussions, and workshop concepts can be scoped to your audience. Availability, delivery mode, duration, and fees are confirmed directly. The topic outlines describe intended takeaways.

Read the AI economics essay and explore the cost calculator.
